

ELECTRICALLY CONTROLLED DELUGE VALVE WITH LOCAL RESET - 2-WAY SOV

Model FP-400E-2M

The BERMAD model 400E-2M is an elastomeric, hydraulic, line pressure operated deluge valve, designed specifically for advanced fire protection systems and the latest industry standards. The 400E-2M is activated by a 2-Way solenoid valve. Once open the 400E-2M latches open until locally reset.

The optional valve position indicator can include a limit switch suitable for Fire & Gas monitoring systems. The 400E-2M is ideal for systems with open nozzles for water or foam discharge and is available with electrical components to suit any hazardous location.

- Safety and reliability
 - Time proven, simple design with a fail safe actuation
 - Single piece rugged elastomer, VRSD technology
 - Obstacle-free, uninterrupted flow path
 - No mechanical moving parts
 - UL429A Listed 2-Way Solenoid Valve
 - Latches open: remains open until reset locally
- Quick and easy maintenance
 - Designed for high reliability and easy maintenance
 - In-line serviceable
 - Fast and easy cover removal

Approvals

UL-Listed Special System Water Control Valves, Deluge Type (VLFT) Sizes 11/2" - 10"

Det Norske Veritas Type Approval Sizes 1½" to 12"

ABS American Bureau of Shipping Type Approval Sizes 11/2" - 12"

Lloyd's Register Type Approval Sizes 1½" - 10"

Typical Applications

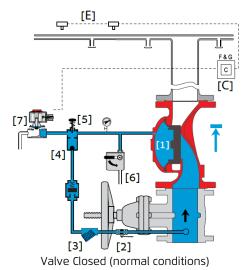

- Electric fire detection systems with control panels
- Automatic water spray systems
- Corrosive water systems
- Foam applications

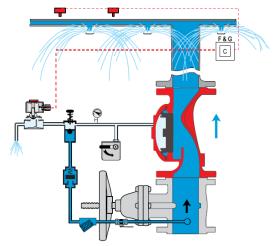

Additional Features

- Valve position limit switches
- Seawater compatibility
- Alarm pressure switchValve Position Indicator
- Corrosion resistant zinc based high build epoxy coating

FP-400E-2M Local Reset

Operation

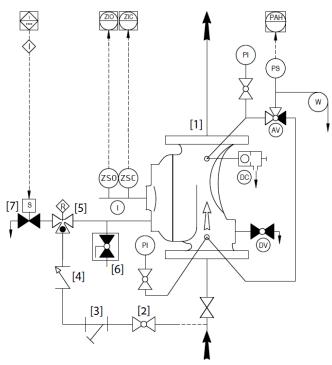

Valve Open (fire conditions)

The BERMAD model 400E-2M is held closed by water pressure in the control chamber [1]. Upon release of pressure from the control chamber, the valve opens.

Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] and strainer [3], and is then trapped in the control chamber by the check valve feature [4] of the easy-lock manual reset [5], the closed manual emergency release [6], and the closed solenoid valve [7]. The water pressure trapped in the control chamber of the deluge valve holds the diaphragm against the valve seat, sealing it drip-tight and keeping the system pipes dry.

Under FIRE conditions, water pressure is released from the control chamber, either with the manual emergency release, or by the solenoid switching to the release position in response to a signal from the heat detection system [E] by way of the fire & gas control system [C]. This opens the deluge valve allowing water to flow into the system piping and to the alarm devices. The 400E 2M latches open until reset locally by depressing the Easy-Lock button.

System P&ID

	Components
1	BERMAD 400E Deluge Valve
2	Priming Ball Valve
3	Priming Strainer
4	Check Valve
5	Easy-Lock – Manual Reset
6	Manual Emergency Release
7	2-Way Solenoid

	Optional System Items							
ZS	Limit Switch Assembly							
W	Water Motor Alarm							
PS	Pressure Switch							
-1	Visual Valve Position indicator							
PI	Pressure Gauge*							
DV	Drain Valve*							
DC	Automatic Drip Check Valve*							
AV	3-way Alarm Test Valve*							

* Included with suffix A in valve code (drain and indicating components) See code designations and "factory supplied additional items" on page 4 **-400E-2M** Local Reset

System Installation

A typical installation of the BERMAD model 400E-2M, features automatic actuation by way of a 2-Way solenoid. It can also be triggered electrically by a signal from a fire & gas control system or an on-site emergency pushbutton. When open and fitted with a limit switch the valve can send a feedback signal to a remote valve status monitoring system.

Optional System Items

Water Motor Alarm

Exd Pressure Switch - Stainless Steel Enclosure for Harsh

Environments Single Ex d

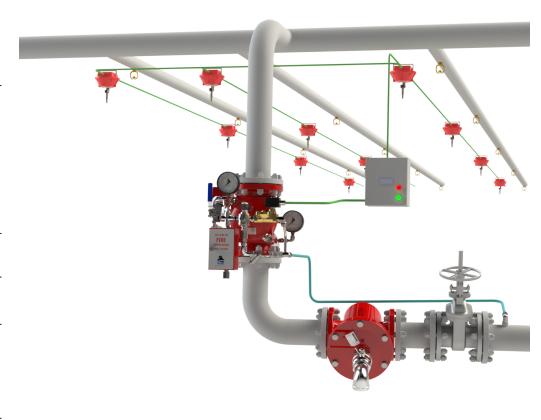

Proximity S.S.316 Limit Switch

Pressure Gauge

Basket Strainer sos

Suggested Specifications

The deluge valve shall be UL-listed, 250 psi/17.2 bar rated.

The valve shall have an unobstructed flow path, with no stem guide or supporting ribs.

The deluge valve shall have no mechanical moving parts, and the actuation shall utilize a single-piece diaphragm assembly of VRSD technology.

The valve shall be coated internally and externally with UV protection. Optional: C5-VH grade of ISO-12944 standard against corrosive conditions.

The solenoid valve shall be a 2-way FM and UL429A-listed for 365 psi/25 bar with 65% of the rated voltage.

The control trim shall include a manual emergency release unit, an Easy-Lock latching valve, a Y-type strainer, two 4-inch pressure gauges, and an automatic drip-check with manual override.

A valve position indicator shall be provided, and equipped with two proximity limit switches.

Removing the valve cover for full inspection and maintenance shall be in-line, and not require removal of the valve from the pipeline.

The deluge valve and control trim shall be pre-assembled and hydraulically tested by a UL/FM and ISO 9000, 9001 certified factory.
