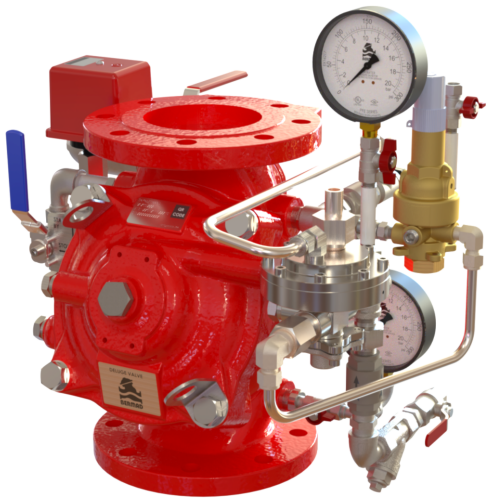
DRY PIPE SPRINKLER VALVE WITH PRESSURE CONTROL

Model FP-400Y-DPC

The BERMAD model 400Y-DPC utilizes an elastomeric deluge valve, designed specifically for advanced fire protection systems and the latest industry standards. Dry-pipe systems include automatic sprinklers attached to pressurized dry sprinkler piping with supplementary electric monitoring and a Supervised Pneumatic system installed in the same area.
The 400Y-DP admits water into the sprinkler system piping when there is a drop in pressure in the piping due to the opening of one or more fusible head sprinklers.
As an option the 400Y-DP features a rotating valve position indicator available with limit switches for remote valve position monitoring.



Features & Benefits

- Safety and reliability
  - No mechanical moving parts
  - Valve position limit switches (optional)
  - Obstacle-free, uninterrupted flow path
  - Local valve position indicator beacon (optional)
  - Single piece, rugged elastomeric diaphragm seal - VRSD technology
- High performance
  - High discharge capacity
  - Straight through Y type body
  - Approved for PN25 / 365 psi
- Quick and easy maintenance
  - In-line serviceable
  - Fast and easy cover removal
  - Swivel mounted drain valves (for valves 3" and larger)

Approvals

c UL us LISTED	UL-Listed Dry Pipe and Deluge Valves for Fire Protection Service. Sizes 1½" - 10"
FM APPROVED	FM Approved Dry Pipe Valves Sizes 1½" - 8"
DNV	Det Norske Veritas Type Approval
ABS TYPE APPROVED PRODUCT	ABS American Bureau of Shipping Type Approval
Lloyd's Register TA TYPE APPROVED	Lloyd's Register Type Approval

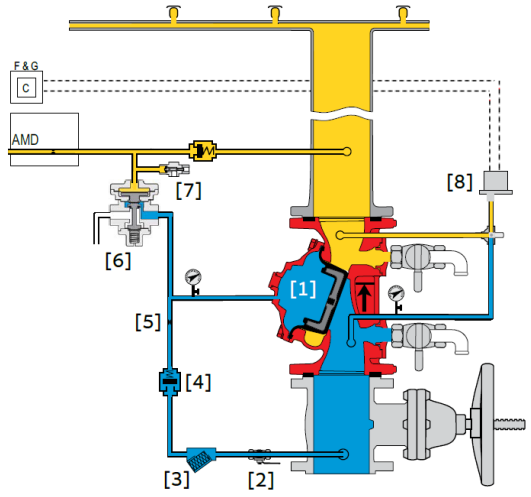
Typical Applications

- Water sensitive material storage
- Freezing Environments

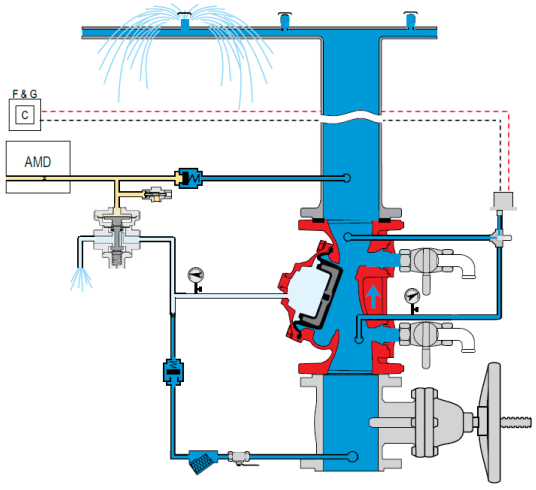
Additional Features

- Seawater compatibility
- Valve position limit switches
- Air Maintenance Device, AMD-74 or 75
- Local valve position indicator
- Corrosion resistant zinc based high build epoxy coating
- Ex Proof Pressure Switches

Operation



Valve Closed (normal condition)



Valve Open (fire condition)

The BERMAD model 400Y-DP is held closed by water pressure in the control chamber [1]. Upon release of pressure from the control chamber, the valve opens.
Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] strainer [3], restriction orifice [5] and is then trapped in the control chamber by a check valve [4] and a URV relay valve [6] which is held closed by the pneumatic pressure of the dry sprinkler pipeline. When required an optional auto drain device can be installed to prevent water accumilation in the dry pipe.
In the event of fire the activation of the automatic sprinkler/s will cause a drop in pneumatic pressure, upon which the URV relay valve will open and the air pressure switch [8] will be activated. Water pressure will be released from the main valve control chamber, opening the main valve and admitting water into the piping and to pressure switch [8] connected to the alarm device [8].
Once open the main valve will latch in this position, closing the main valve can be done only manually and locally by resetting or reclosing the low pressure accelerator valve with the restored pipeline air pressure.

System P&ID

	Components
1	BERMAD 400Y Deluge Valve
2	Priming ball valve
3	Priming strainer
4	Check valve
5	Restriction orifice
6	Low pressure accelerator
7	URV relay pilot valve
8	Pressure gauge
9	Drain valve
10	3-Way alarm test valve
11	PS40-2 Pressure switch, 2xSPDT (with separate PSH/PSL)

	Optional System Items
ZS	Limit Switch Assembly
AMD	Air Maintenance Device
I	Visual Valve Position indicator
W	Water Motor Alarm
PI	Pressure Gauge

System Installation

A typical installation of the BERMAD model 400Y-DP features a pressurized dry sprinkler pipeline in the protected area with a Supervised Pneumatic System installed in the same area. Valve opening is in response to the activation of one or more of the fusible sprinkler heads causing a drop in the dry sprinkler pipeline pressure, triggering the URV relay valve to open the 400Y-DP valve. When fitted with a limit switch the main valve can send a feedback signal to a remote valve status monitoring system.
The pneumatic system shall maintain a pressure between 1.5-1.6 barg (22-23 psi) supplying a dry, clean, dependable and continuous compressed-air source via an Air Maintenance Device.

Optional System Items

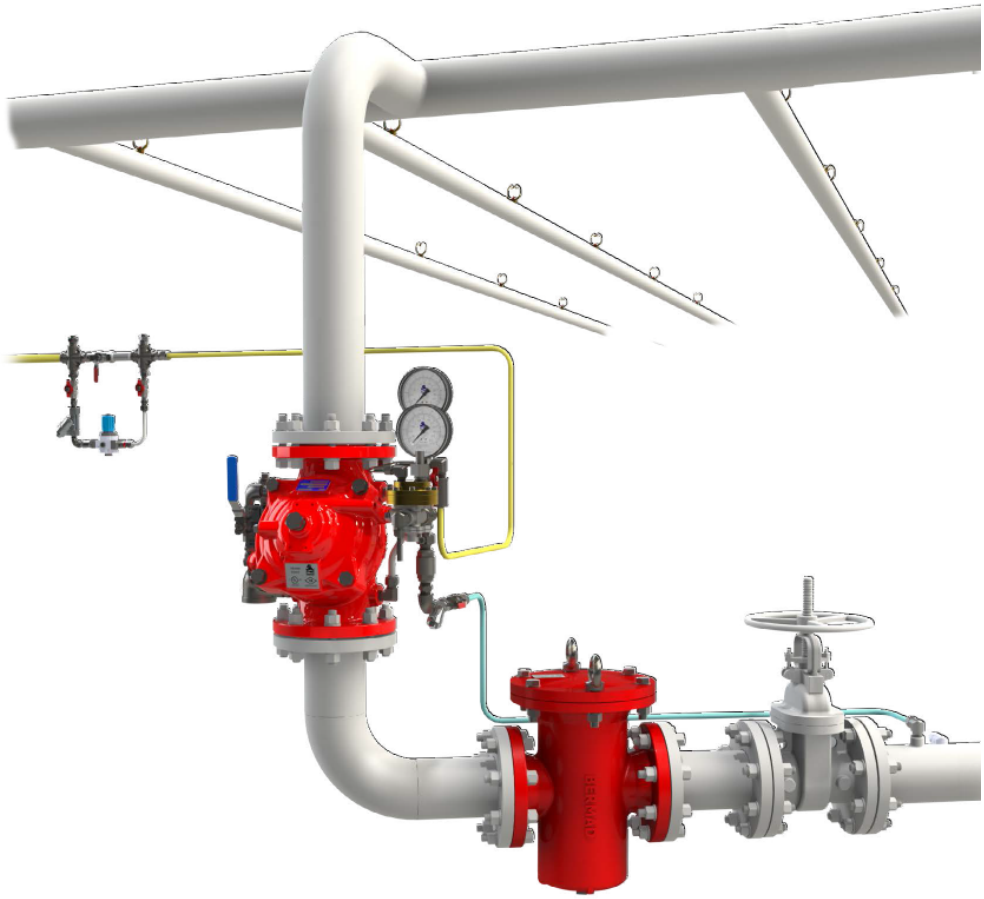
S.S. Glycerin Filled Pressure Gauge

Visual Position Indicator

Rotating Limit Switch Box

Water Motor Alarm

Basket Strainer - 60F



Suggested Specifications

The valve shall be UL-listed and FM-approved, 365-psi/25-bar rated, with a straight-through Ytypebody.
The valve shall have an unobstructed flow path, with no stem guide or supporting ribs.
The valve shall have no mechanical moving parts, and the actuation shall utilize a single-piece diaphragm assembly of VRSD technology.
The valve shall be coated internally and externally with UV protection. Optional: C5-VH grade of ISO-12944 standard against corrosive conditions.
The control trim shall include a relay valve with a latching low pressure release valve, a manual emergency release unit, a Y-type strainer, two 4-inch pressure gauges, and ball drain valves with a 360 degree swivel.
A valve position indicator shall be provided, and equipped with two proximity limit switches.
Removing the valve cover for full inspection and maintenance shall be in-line and not require removal of the control trim.
The deluge valve and control trim shall be pre-assembled and hydraulically tested by a UL/FM and ISO 9000, 9001 certified factory.

Technical Data

Available Sizes:
Flanged- 1½, 2, 2½, 3, 4, 6, 8 & 10"
Grooved- 1½, 2, 2½, 3, 4, 6, 8 & 10"

Pressure Rating:
ANSI#150 - 17.2 bar | 250 psi
ANSI#300 - 1½" to 10" - 25 bar | 365 psi
Grooved - 17.2 / 25 bar | 250 / 365 psi

Elastomer:
HTNR - Fabric Reinforced High Temperature Compound - See engineering data
