

PRESSURE REDUCING VALVE

With 3-Way Solenoid Control And Flow Stem

Model IR-120-55-3W-XM

The BERMAD Pressure Reducing Control Valve with solenoid control is a hydraulically operated, diaphragm-actuated control valve that reduces higher upstream pressure to lower constant downstream pressure regardless of fluctuating demand, and opens fully upon line pressure drop. The BERMAD Model IR-120-55-3W-X either opens or shuts in response to an electric signal.

- [1] BERMAD Model IR-120-55-3W-X opens in response to electric signal, and establishes reduced pressure zone protecting laterals and distribution line.
- [2] Combination Air Valve Model IR-C10
- [3] Kinetic Air Valve Model IR-K10
- [4] Smart Irrigation Controller-OMEGA

Operation:

The Shuttle Valve [1] hydraulically connects the Solenoid [2] or the Pressure Reducing Pilot (PRP) [3] to the Valve Control Chamber [4]. When the solenoid is closed, the PRP commands the valve to throttle closed should Downstream Pressure [P2] rise above setting and to open fully when [P2] is below setting. In response to an electric signal, the solenoid switches, directing line pressure through the shuttle valve into the control chamber, shutting the valve. The solenoid also features local manual closing.
