PRESSURE REDUCING VALVE

With 3-Way Solenoid Control, Pressure Check Point & Plastic Control Accessories

Model IR-420-55-3W-KXZ5

The BERMAD Pressure Reducing Valve with solenoid control is a hydraulically operated, diaphragm actuated control valve that reduces higher upstream pressure to lower constant downstream pressure regardless of fluctuating demand, and opens fully upon line pressure drop. It either opens or shuts in response to an electric signal.

[1] BERMAD Model IR-420-55-3W-KX opens in response to electric signals, and establishes reduced pressure zone protecting laterals and distribution line.
[2] Hydrometer Model IR-900-M0-Magnetic Drive
[3] Combination Air Valve Model IR-C10
[4] Combination Air Valve Model IR-C30

Operation:

The Shuttle Valve [1] hydraulically connects the Solenoid [2] or the Pressure Reducing Pilot (PRP) [3] to the Valve Control Chamber [4] . When the solenoid is closed, the PRP commands the valve to throttle closed should Downstream Pressure [P2] rise above setting, and to open fully when it drops below setting. In response to an electric signal, the solenoid switches, directing line pressure through the shuttle valve into the control chamber. This causes the valve to shut. The solenoid also features local manual opening/closing override.
