

PRESSURE REDUCING VALVE

Model IR-420-55-3W-RX

The BERMAD Pressure Reducing Valve with solenoid control is a hydraulically operated, diaphragm actuated control valve that reduces higher upstream pressure to lower constant downstream pressure regardless of fluctuating demand, and opens fully upon line pressure drop. It either opens or shuts in response to an electric signal.

[1] BERMAD Model IR-420-55-3W-RX opens in response to electric signal, and establishes reduced pressure zone protecting laterals and distribution line.

[2] Water Meter Model MUT2300

[3] Pressure Relief Valve Model IR-13Q-HP

[4] Combination Air Valve Model C30

Features & Benefits

- 3-Way Hydraulically Actuated PRV with electric On/Off control
 - Protects downstream systems
 - Opens fully upon line pressure drop
 - Wide range of pressure settings
 - Wide range of Solenoid operation Voltages
 - Normally Open, Normally Closed or Last Position
- Advanced Hydro-Efficient Globe Design
 - Unobstructed flow path
 - Single moving part
 - High flow capacity
- Fully Supported & Balanced Diaphragm
 - Requires low opening and actuation pressure
 - Excellent low flow regulation performances
 - Progressively restrains valve closing
 - Prevents diaphragm distortion
- User-Friendly Design
 - Easy pressure setting
 - Simple in-line inspection and service

Typical Applications

- Pressure Reducing Systems
- Pressure Zone Isolation
- Flow and Leakage Reduction
- Systems Subject to Varying Supply Pressure
- Energy Saving Irrigation Systems
- Source and "On Duty" Valves Management
- Downhill Supply Lines

Operation:

The Shuttle Valve **[1]** hydraulically connects the Solenoid **[2]** or the Pressure Reducing Pilot (PRP) **[3]** to the Valve Control Chamber **[4]**. When solenoid is energized, PRP commands the valve to throttle closed should Downstream Pressure **[P2]** rise above setting, and to open when **[P2]** falls below setting. Should line pressure remain below setting - the valve opens fully. In response to an electric signal, the solenoid switches, directing line pressure through the shuttle valve into the control chamber. This causes the valve to shut.

Technical Data

Pressure Rating:

16 bar

Operating Pressure Range:

0.5-16 bar

Materials

Body & Cover:

Cast iron (up to 8") Ductile iron (10" & 12")

Diaphragm:

NR, Nylon fabric reinforced

Spring:

Stainless Steel

**Other materials are available on request*

Control Loop Accessories

PR Pilot: PC-SHARP-X-MP

Pilot Spring Range:

Spring	Spring Color	Setting range
K	Gray	0.5-3.0 bar
N	Natural	0.8-6.5 bar
V	Blue & White	1.0-10.0 bar
P	White	1.0-16.0 bar

Standard spring - marked in bold

Tubing and Fittings:

Reinforced Nylon and Brass

AC solenoid:

S-400-3W-PB

DC latch solenoid:

S-982-3W M.B.

**For other solenoids and pilots please consult [BERMAD](http://www.bermad.com)*

Technical Specifications

For other end connection types, Please refer to [BERMAD](http://www.bermad.com) full engineering page.

CCDV = Control Chamber Displacement Volume • Threaded = BSP & NPT are available.

Additional Features

Code	Description	Size Range
F	Large Control Filter	1½"-12" / DN40-300
I	Position Indicator Assembly	1½"-12" / DN40-300
M	Flow Stem	1½"-12" / DN40-300

Flow Chart

Differential Pressure & Flow Calculation

$$\Delta P = \left(\frac{Q}{K_v} \right)^2$$

$K_v = m^3/h @ \Delta P \text{ of } 1 \text{ bar}$
 $Q = m^3/h$
 $\Delta P = \text{bar}$
