

SOLENOID CONTROLLED HYDROMETER

Model IR-910-ME-3W-KX

The BERMAD Hydrometer with solenoid control combines a turbine Woltman-type water meter and a hydraulically operated, diaphragm-actuated control valve. It functions as both a mainline flow meter and a solenoid-operated valve, opening and closing in response to an electric command from a control system. The Hydrometer features a magnetically coupled, vacuum-sealed electronic register for precise volume and flow measurement, and includes a pulse output for enhanced monitoring and control.

Operation:

Line pressure [1] is applied to the Control Chamber [2] through the 3-Way Normally Open Solenoid [3], generating a hydraulic force that moves the Diaphragm Assembly [4] to the closed position. When the solenoid is electrically activated, it switches to release pressure from the control chamber, allowing the Hydrometer to open and measure flow. The solenoid also features a manual override for opening and closing.
