

PRESSURE REDUCING HYDROMETER

Model IR-920-ME-3W-KXZ

The BERMAD pressure reducing Hydrometer with manual selector combines a Woltman-type turbine water meter and a hydraulically operated, diaphragm-actuated control valve. It functions as both a mainline flow meter and a pressure-reducing valve, reducing a higher upstream pressure to a constant downstream pressure and opening fully if line pressure drops below the setting. The Hydrometer features a magnetically coupled, vacuum-sealed electronic register for precise volume and flow measurement, and includes a pulse output for enhanced monitoring and control.

[1] BERMAD Model IR-920-ME-3W-KXZ establishes reduced pressure zone, protecting laterals and distribution line.

Typical Applications

- Remote Flow Data Read-Out
- Flow Monitoring & Leakage Control
- Pressure Reducing Systems
- Systems Subject to Varying Supply Pressure
- Volumetric Irrigation Systems

Operation:

When the Manual Selector **[1]** is set to AUTO, the Hydrometer opens, and the Pressure Reducing Pilot (PRP) **[2]** regulates flow by commanding the Hydrometer to throttle closed if Downstream Pressure **[P2]** rise above pilot setting and to open fully when it drops below setting. Switching the selector to CLOSE shuts the Hydrometer completely.

Differential Pressure & Flow Calculation

$$\Delta P = \left(\frac{Q}{K_v} \right)^2$$

$K_v = m^3/h \text{ @ } \Delta P \text{ of 1 bar}$
 $Q = m^3/h$
 $\Delta P = \text{bar}$
