

# DIRECT ACTING PRESSURE REDUCING VALVE

## Model DPRV-2HC

Spring loaded, direct acting pressure reducing valve that reduces a high upstream pressure to a lower downstream pressure. This model is often used as a pilot control for various BERMAD pilot operated models.

### Features

- Certified to functional and drinking water standards: EN-1074, NSF/ANSI 61/372, WRAS, AS 5081 and others
- Provides immediate and precise response to sudden operating condition changes
- Drip tight sealing
- Robust design – Engineered for continuous, demanding operation
- High quality construction materials
- In-line serviceable
- Easy pressure adjustment

### Typical Applications

- Pressure reduction for small-scale systems.
- Low flow bypass for pilot-operated PRV.
